

SUN COBALT RaQ™ XTR Server Appliance

HIGH-PERFORMANCE, EXTENSIBLE HOSTING APPLIANCE

WITH CUTTING-EDGE DESIGN, IT'S THE FIRST 1RU SERVER APPLIANCE TO OFFER UP TO FOUR FRONT-REMOVABLE, RAID HARD DISK DRIVES IN ADDITION TO THE SUPERIOR EASE OF USE & SIMPLICITY THAT SUN COBALT™ APPLIANCES HAVE BEEN KNOWN FOR.

INTRODUCING THE NEW, HIGH-PERFORMANCE SERVER APPLIANCE FROM SUN COBALT™. Born out of the product that revolutionized the hosting market, Sun Cobalt server appliances are a new class of infrastructure built specifically to deliver feature-rich network based applications. The Sun RaQ™ XTR represents a new era for servers; easier to use, more reliable and better suited to generate a greater return on investment. Out of the box, it offers a complete solution that combines hardware and integrated software that is uniquely designed toward an increased focus on networked client-server environments.

Complete, Turnkey Hosting Platform for Service Providers

The Sun Cobalt RaQ XTR server appliance is pre-configured with all the necessary tools and services to deploy content-rich Web sites in just minutes. With only a few simple clicks on the server's web administration interface, administrator's can securely create new internet sites that offer web, email, file transfer, and web publishing services. Each site can be configured to support a variety of dynamic content technologies including CGI scripting with perl, PHP, ASP, and server side includes. These technologies are central to the development environment of Application Service Providers and web developers. Once sites are active, comprehensive reporting software enables administrator's to generate graphical reports on the network, web, mail, and file transfer history of the server. Additionally, the Sun Cobalt custom ActiveMonitor software on the server periodically runs to monitor all systems and services and warns the administrator if there are potential problems.

- HIGH PERFORMANCE AND HIGH RELIABILITY IN A 1U DENSITY-OPTIMIZED FORM FACTOR
- FOUR HARD DISK DRIVES ACCESSIBLE THROUGH THE FRONT PANEL, OFFERING RAID LEVELS 0, 1 AND 5
- TURNKEY SERVER APPLIANCE WITH PRE-CONFIGURED SERVICES AND APPLICATIONS

The Sun RaQ XTR server appliance also offers DNS service, management and monitoring via SNMP, bandwidth management capabilities and support for a number of third party backup packages. To ensure optimal performance, the appliance comes with Sun BlueLinQ technology which keeps administrators informed of new software and updates that become available.

Open Access. Sun RaQ XTR server appliance features a unique front panel which opens to allow easy access to your Hard Disk Drives.

Increased Performance and Expandability for Resource-Intensive Applications

Thanks to its new cutting-edge design, the Sun RaQ XTR server appliance is the first of its kind to offer a software-rich, services-centric design coupled with 4 front-removable Hard Disk Drives, choice of 850 MHz or 1 GHz processor and 2 GB of Registered ECC PC133 SDRAM in a 1U density-optimized form factor. The appliance also offers a superior level of reliability by offering Redundant Array of Independent Disks (RAID) level 0, 1 and 5 - making it the ideal platform for the delivery of business-critical applications on the Net.

Delegated Administration to Your Customers

Unique to the Sun Cobalt server appliance family is the integration of application and system functions into a unified easy-to-use interface (UI) called the Server Desktop. The Sun RaQ XTR server appliance comes pre-configured and pre-tested enabling service providers to vend applications and services to the mass market. Unlike traditional servers, it is an application specific product, which offers the user a new level of simplicity and economics. In less than 15 minutes of powering up the server, a non-technical user can have complete access to web hosting, email, ecommerce and other applications. The Server Desktop shields the administrator from technical complexities and minimizes the need for trained staff.

<p>ISP and end-user services</p>	<ul style="list-style-type: none"> • Sun Cobalt Server Desktop - an intuitive Web-based administration interface divided in 3 management levels: "System", "Site" and "User". • Web serving - Integrated support for HTTP/ 1.1, SSL Active Server Pages (ASP), PHP 4, Common Gateway Interface (CGI) and Perl scripting. • Virtual Sites support - Server offers name-based and IP-based virtual sites. IP-based virtual sites can be limited to a pre-selected throughput rate using Sun Cobalt Bandwidth Management. • RAID 0, 1, and 5 - support for RAID levels 0, 1 and 5, implemented through software. Each hard disk drive has its own independent master channel to allow high performance without extra RAID hardware. • Email services - Services include mail accounts for each domain, automatic vacation responses, automatic forwarding and group mailing lists. • Sun Cobalt BlueLinQ Application Delivery Service - The server automatically informs the administrator of available system updates and patches or new applications. • SQL Database support - Sun RaQ XTR integrates the InterBase™ open-source database and PostgreSQL. • Development Environment - included is a full suite of development tools, including GNU C/C++ compiler, Java™ Development Kit, Programming languages (perl, python, tcl/tk), Text editors (emacs, vi, pico), gdb debugger, libraries & X11 libraries and more.

About Sun Cobalt Server Appliances

Sun Cobalt server appliances and ASP software solution enable organizations to establish an online presence easily, cost effectively and reliably. The Sun Cobalt product lines— the Cobalt Qube, Cobalt Cache, Cobalt RaQ, Cobalt NASRaQ and Chili!Soft ASP— are used by businesses, service providers and educational institutions for Internet and Web-hosting services. The Sun Cobalt solutions are delivered through a global network of distributors, value-added resellers and Internet service providers. For more info about Sun Cobalt server appliances, please visit www.cobalt.com.

About Sun Microsystems, Inc.

Since its inception in 1982, a singular vision - The Network Is The Computer™— has propelled Sun Microsystems, Inc. (Nasdaq: SUNW), to its position as a leading provider of industrial-strength hardware, software and services that power the Internet and allow companies worldwide to dot-com their businesses. With \$17.6 billion in annual revenues, Sun can be found in more than 170 countries and on the World Wide Web at www.sun.com.
